

Sorghum Test Weight

*Cumulative Distribution represents the cumulative percentage of sorghum farm gate samples grading below the indicated test weight. For example, for a test weight of 55 lbs/bushel, 15.4% of samples graded below 55 lbs/bushel and 84.6% of samples graded at or above 55 lbs/bushel. **Note:** Only 1,008 samples represented due to 28 inadequate sample portions for calculating test weight
